REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance:

The instant application is directed towards a non-obvious improvement in the over-speed safety device art. Specifically, Applicant claims an over-speed device for a pneumatic rotation motor comprising an actuator having a contact element connected to the rotor and valve shiftable by the actuator contact element. The valve is disc-shaped and has a pivot axis that is laterally offset from the axis of rotation of the rotor.

While over-speed devices having disc-shaped valves are known in the art, i.e. US Patent 4,298,317 to Hansson, and devices that rely on radial movement to actuate valves are known, i.e. US Patent 4,278,103 to Giardino, none of the known prior art teaches or suggests a valve having a pivot access that is offset from the axis of rotation of the rotor or an actuator contact element used to shift the valve as disclosed by Applicant.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
